

2.2 Multiple Qubits and Entangled States

1) Write the tensor product of

- $|0\rangle|1\rangle =$

$$\begin{pmatrix} 10 \\ 11 \\ 00 \\ 01 \end{pmatrix}$$

- $|0\rangle|+\rangle =$

$$1/\sqrt{2} \begin{pmatrix} 11 \\ 11 \\ 01 \\ 01 \end{pmatrix}$$

- $|+\rangle|1\rangle =$

$$1/\sqrt{2} \begin{pmatrix} 10 \\ 11 \\ 10 \\ 11 \end{pmatrix}$$

- $|-\rangle|+\rangle =$

$$1/2 \begin{pmatrix} 11 \\ 11 \\ -11 \\ -11 \end{pmatrix}$$

2) Write the state: $|\psi\rangle = 1/\sqrt{2} (|00\rangle + i|01\rangle)$ as two separate qubits.

Ans. $1/\sqrt{2} (|00\rangle + i|01\rangle) = |0\rangle \otimes 1/\sqrt{2} (|0\rangle + i|1\rangle)$

3) Calculate the single qubit unitary (U) created by the sequence of gates: $U = XZH$. Use Qiskit's unitary simulator to check your results.

(Refer pdf1 file attached)

4) Create a quantum circuit that produces $1/\sqrt{2} (|01\rangle + |10\rangle)$. Use the statevector simulator to verify your result.

(Refer pdf1 file attached)

5) The circuit created above transform the state $|00\rangle$ to $1/\sqrt{2} (|01\rangle + |10\rangle)$, calculate the unitary of this circuit using Qiskit's simulator.
